Dynamic Planet C - Dynamic Planet BC High Desert MINI 2C - Mini 2 C - 01-14-2022

Remain in TEST BROWSER while taking the test to avoid penalty points or disqualification

Use lower case letters unless a Proper Name or told to do so

1. (2.00 pts) _____ _____ : A land area in which surface runoff drains into a river system

water shed

2. (2.00 pts) Water that has a large amount of dissolved minerals is called _____.

hard

3. (2.00 pts) _____ : When rain or snow soaks into the ground and enters the groundwater supply.

percolation

4. (2.00 pts) The Chara muskgrass, is considered as which type of aquatic plant?

submergent

5. (2.00 pts) Which 2 seasons have the most overturn occurring in the water?

(Mark **ALL** correct answers)

- [x] A) Spring
- [ ] B) Summer
- [x] C) Fall
- [ ] D) Winter

6. (2.00 pts) The deepest, densest, cold layer where very little oxygen exists is considered the _____

hypolimnion

7. (2.00 pts) High specific heat of water makes aquatic environment temperatures more stable than terrestrial environment temperatures.

- (●) True
- ( ) False

8. (2.00 pts) What is the correct term for the study of freshwater systems?

limnology

9. (2.00 pts) Zone of _____ is the area underground where there is not any water?

aeration

10. (2.00 pts) The top of the water-filled spaces in the ground is called the _____ _____.

water table

11. (2.00 pts) Which depositional feature is found at the coast?

- (●) A) Delta
- ( ) B) Flood plain
- ( ) C) Alluvial fan
- ( ) D) Glacier deposit

12. (2.00 pts) Which of the following is a point source of water pollution?

(Mark **ALL** correct answers)

- [ ] A) Fertilizer from a farming area
- [ ] B) Runoff from city streets
- [x] C) A wastewater pipe
- [ ] D) Leaking septic tank

13. (2.00 pts) During primary treatment at a sewage treatment plant,

(Mark **ALL** correct answers)

- [ ] A) Water is sent to an aeration tank.
- [ ] B) Water is mixed with bacteria and oxygen.
- [x] C) Dirty water is passed through a large screen.
- [ ] D) Water is sent to a settling tank where chlorine is added.

14. (2.00 pts) Old rivers are characterized by

- ( ) A) High erosive energy
- ( ) B) Tectonic activity
- ( ) C) Straight channels
- (●) D) Sediment deposition

15. (2.00 pts) _____ occurs when water vapor cools and changes into liquid water droplets that form clouds.

condensation

16. (2.00 pts) A _____ _____ is the land drained by a river system, including the main river and its tributaries.

drainage basin

17. (2.00 pts)
If a river starts at an elevation of 8,500 m and travels 700 km downstream to a lake that is at an elevation of 800 m, what is the stream's gradient? _____ m/km (whole number)

11

18. (2.00 pts) A river will cause the most erosion with:

(Mark **ALL** correct answers)

- [ ] A) Low gradient
- [ ] B) Low discharge
- [x] C) High gradient
- [x] D) High discharge

19. (2.00 pts) The materials carried in a stream's water are collectively called the stream's _____.

load

20. (2.00 pts) The _____ stage of a river would be characterized by wide, flat floodplains.

old

21. (2.00 pts) One difference between an alluvial fan and a delta is that an alluvial fan is____

- (●) A) Deposited on dry land
- ( ) B) Deposited in water
- ( ) C) Formed by stream deposition
- ( ) D) Relatively flat

22. (2.00 pts) Toxic runoff can pollute a stream and also

- ( ) A) produce acid rain
- ( ) B) create algae blooms.
- ( ) C) cause soil erosion
- (●) D) pollute groundwater

23. (2.00 pts) Which human activity directly affects the quality of freshwater resources?

- ( ) A) depleting the ozone layer
- ( ) B) throwing trash out of car windows
- ( ) C) burning gasoline in car engines
- (●) D) allowing runoff from agricultural fields

24. (2.00 pts) What is most responsible for the presence of groundwater in an area?

- ( ) A) the movement of water from a confined aquifer into surface water
- ( ) B) the movement of water from streams and rivers to watersheds
- (●) C) the movement of surface water and precipitation through the soil and rock
- ( ) D) the movement of surface water through impermeable rock

25. (2.00 pts) A rural, forested area receives a lot of rain in a short amount of time. What would most likely cause potential flooding in the area?

- ( ) A) if the area has a large uncharged aquifer beneath it

B) if the ground of the area is already saturated with water

C) if the water level in the area is below the zone of saturation

D) if the ground of the area is mostly sandy soil

26. (2.00 pts) Which of the following make up part of Earth's groundwater?

A) wetlands

B) aquifers

C) rivers

D) lakes

27. (2.00 pts) Plants release water into the atmosphere through a process called_____

transpiration

28. (2.00 pts) A _____ basin or river basin is the land area that contributes water to a river

drainage

29. (2.00 pts)
Aquifers that allow for good groundwater flow have many open spaces between the rocks or sediments that are connected to each other because they are _____ and porous.

permeable

30. (2.00 pts) _____ Zone is the area where water enters the aquifer.

recharge

31. (2.00 pts) The boundary between the zone of aeration and the zone of saturation is called the _____ _____.

water table

32. (2.00 pts) Which of the following has the lowest porosity?

A) clay

B) gravel

C) silt

D) sand

33. (2.00 pts) A land area that is covered with water for part of the year is called a(n) _____.

wetland

34. (2.00 pts) A land area that is covered with water for part of the year is called

A) Wetlands act as a filtering system.

B) Wetlands block water from flowing

C) Wetlands are a place where birds go to die.

D) Wetlands provide habitat for cactus.

35. (2.00 pts) Wetlands help control flooding by

- (●) A) absorbing runoff from heavy rains
- ( ) B) providing natural water filtration
- ( ) C) collecting water behind dams
- ( ) D) quickly releasing water

36. (2.00 pts) What do we call the land area that supplies water to a river system?

watershed

37. (2.00 pts) A hole dug into an aquifer to reach groundwater is called a(n)_____

well

38. (2.00 pts) An _____ is an underground layer of rock or sediment that holds water.

aquifer

39. (2.00 pts) A _____is a river that flows into another river.

tributary

40. (2.00 pts) The build up of nutrients in a lake is a process called _____.

eutrophication

41. (2.00 pts) A _____ stream forms when a stream with a low gradient develops a series of gradual bends which may become oxbow lakes

meandering

42. (2.00 pts) _____ order streams are the smallest and begin at high elevation?

first

43. (2.00 pts) Which 2 seasons have the most overturn occurring in the water?

(Mark **ALL** correct answers)

- [x] A) Spring
- [ ] B) Summer
- [x] C) Fall
- [ ] D) Winter

44. (2.00 pts) Which season would best be identified by the thermal stratification above?

summer

45. (2.00 pts) In general, as the temperature decreases, the amount of dissolved oxygen increases.

- (●) True
- ( ) False

46. (2.00 pts) Dissolved oxygen enters the water through Photosynthesis and The Atmosphere

- (●) True
- ( ) False

47. (2.00 pts) The largest thermocline exists during Spring

- ( ) True
- (●) False

48. (2.00 pts) The deepest, densest, cold layer where very little oxygen exists is considered the Eplimnion

- ( ) True
- (●) False

49. (2.00 pts) High specific heat of water makes aquatic environment temperatures more stable than terrestrial environment temperatures.

- (●) True
- ( ) False

50. (2.00 pts) Which of the following is not a way in which lakes are formed?

- ( ) A) Geological Activity
- ( ) B) Meander Rivers
- ( ) C) Glacial Deposits
- (●) D) Scaffolds

51. (2.00 pts) How exactly do glaciers form lakes?

Expected Answer: The movement of those large glacial deposits eroded the land over time and then when glacier melts it fills the eroded basin

52. (2.00 pts) _____ is the term for the study of freshwater systems?

limnology

53. (2.00 pts) In which layer does water reach freezing temperatures?

- (●) A) Epilimnion
- ( ) B) Hypolimnion
- ( ) C) Metalimnion
- ( ) D) Thermocline

54. (4.00 pts) If the bottom most thermal-stratification layer generally consists of the coldest water, why doesn't water sink to the lake floor?

Expected Answer: Because its molecules are more closely packed together in liquid form than in solid form

You have reached the END of the Test. If time remains be sure you have no unanswered questions
