Remain in TEST BROWSER while taking the test

Use lower case letters unless a Proper Name or told to do so

1. (2.00 pts) _____ _____ : A land area in which surface runoff drains into a river system

water shed

2. (2.00 pts) Zone of _____: The area below ground in which the pore space is filled with water.

saturation

3. (2.00 pts) Plants supply us with food and oxygen in a process known as _____.

transpiration

4. (2.00 pts) Water that has a large amount of dissolved minerals is called _____.

hard

5. (2.00 pts) What percentage of the Earth's freshwater is frozen?

- A) 75%
- B) 2%
- C) 97%
- D) 3%

6. (2.00 pts) Cold water can hold more dissolved oxygen than warm water.

- True
- False

7. (2.00 pts) _____ : When rain or snow soaks into the ground and enters the groundwater supply.

percolation

8. (2.00 pts) The temperature at which water has its greatest density and smallest volume is _____

- A) 0 degrees C
- B) 4 degrees C
- C) -4 degrees C
- D) 32 degrees C

9. (2.00 pts) _____ fish are born in freshwater, migrate to salt water for the majority of their lives, and return to freshwater to spawn

anadromous

10. (2.00 pts) The Chara muskgrass, is considered as which type of aquatic plant?

submergent

11. (2.00 pts) Which definition best describes the Littoral Zone?

- A) A deep area of water where light does not penetrate
- B) An area known as the hypolimnion where plants thrive
- C) A shallow area of water where light penetrates
- D) An area known as the metalimnion where plants thrive

12. (2.00 pts) What discourages overturn from occurring in lake water?

- A) Thermal Stratification
- B) Pressure Change
- C) Absorption of Light
- D) None of the above

13. (2.00 pts) Which 2 seasons have the most overturn occurring in the water?

(Mark **ALL** correct answers)

- [x] A) Spring
- [ ] B) Summer
- [x] C) Fall
- [ ] D) Winter

14. (2.00 pts) Dissolved oxygen enters the water through:

(Mark **ALL** correct answers)

- [ ] A) The Atmosphere and Aquatic Organisms
- [x] B) Photosynthesis and The Atmosphere
- [ ] C) Photosynthesis and Aquatic Organisms
- [ ] D) Glaciers and Photosynthesis

15. (2.00 pts) The largest thermocline exists during which season?

summer

16. (2.00 pts) The deepest, densest, cold layer where very little oxygen exists is considered the _____

hypolimnion

17. (2.00 pts) High specific heat of water makes aquatic environment temperatures more stable than terrestrial environment temperatures.

- True
- False

18. (2.00 pts) Which of the following is not a way in which lakes are formed?

- A) Geological Activity
- B) Glacial Deposits
- C) Meander Rivers
- D) Scaffolds

19. (2.00 pts) What is the correct term for the study of freshwater systems?

limnology

20. (2.00 pts) In which layer does water reach freezing temperatures?

- A) Epilimnion
- B) Metalimnion
- C) Hypolimnion
- D) Thermocline

21. (2.00 pts) If the bottom most thermal-stratification layer generally consists of the coldest water, why doesn't water sink to the lake floor

- A) Because its solid state is more dense than its liquid state
- B) Because its liquid state is less dense than its solid state
- C) Because its molecules are more closely packed together in liquid form than in solid form
- D) Because its molecules are spread out farther apart in solid form than its liquid form.

22. (2.00 pts) Zone of _____ is the area underground where there is not any water?

aeration

23. (2.00 pts) The amount of space between soil is known as _____.

porosity

24. (2.00 pts) A place underground that stores water is call a/an _____.

aquifer

25. (2.00 pts) The top of the water-filled spaces in the ground is called the _____ _____.

water table

26. (2.00 pts) Which type of stream load makes a river muddy?

- A) Bed load

B) Dissolved load

C) Suspended load

D) Gravelly load

27. (2.00 pts) What features are common in youthful river channels?

A) Meanders

B) Flood plains

C) Rapids

D) Sandbars

28. (2.00 pts) Which depositional feature is found at the coast?

A) Delta

B) Flood plain

C) Alluvial fan

D) Glacier deposit

29. (2.00 pts) Caves are mainly a product of ____

A) Erosion by rivers

B) River deposition

C) Water Pollution

D) Erosion by groundwater

30. (2.00 pts) An aquifer must be:

(Mark **ALL** correct answers)

A) Nonporous

B) Porous

C) Non Permeable

D) Permeable

31. (2.00 pts) Which of the following is a point source of water pollution?

(Mark **ALL** correct answers)

A) Fertilizer from a farming area

B) Runoff from city streets

C) A wastewater pipe

D) Leaking septic tank

32. (2.00 pts) During primary treatment at a sewage treatment plant,

(Mark **ALL** correct answers)

- [ ] A) Water is sent to an aeration tank.
- [ ] B) Water is mixed with bacteria and oxygen.
- [x] C) Dirty water is passed through a large screen.
- [ ] D) Water is sent to a settling tank where chlorine is added.

33. (2.00 pts) A stream is most likely to deposit the rock and soil that it carries

- (●) A) Its current slows
- ( ) B) It carries many pollutants
- ( ) C) Its volume increases
- ( ) D) It has a steep gradient

34. (2.00 pts) Old rivers are characterized by

- ( ) A) High erosive energy
- ( ) B) Tectonic activity
- ( ) C) Straight channels
- (●) D) Sediment deposition

35. (2.00 pts) As a stream's velocity increases, it

- ( ) A) Becomes a river
- (●) B) Can carry large particles
- ( ) C) Cuts a wider, shallow channel
- ( ) D) Forms more tributaries

36. (2.00 pts) For a rock layer to function as an aquifer, it must…

- ( ) A) Have a small zone of aeration
- ( ) B) Be part of an artesian formation
- (●) C) Have pores that are connected
- ( ) D) Have a large soil content

37. (2.00 pts) _____ occurs when water vapor cools and changes into liquid water droplets that form clouds.

condensation

38. (2.00 pts) _____ is the movement of water into the ground due to the pull of gravity.

infiltration

39. (2.00 pts) A _____ _____ is the land drained by a river system, including the main river and its tributaries.

drainage basin

40. (2.00 pts) _____ are small rivers that flow into large ones.

tributaries

41. (2.00 pts) Drainage basins are separated from each other by an area called a _____.

divide

42. (2.00 pts)
If a river starts at an elevation of 8,500 m and travels 700 km downstream to a lake that is at an elevation of 800 m, what is the stream's gradient? _____ m/km (whole number)

11

43. (2.00 pts) A river will cause the most erosion with:

(Mark **ALL** correct answers)

- [ ] A) Low gradient
- [ ] B) Low discharge
- [x] C) High gradient
- [x] D) High discharge

44. (2.00 pts) The materials carried in a stream's water are collectively called the stream's _____.

load

45. (2.00 pts) The _____ stage of a river erodes its channel wider rather than deeper

mature

46. (2.00 pts) The _____ stage of a river would be surrounded by terraces.

rejuvenated

47. (2.00 pts) The _____ stage of a river would be characterized by wide, flat floodplains.

old

48. (2.00 pts) At a meander of a river, erosion occurs on the _____(inside/outside) bank where it flows _____(faster/slower)

outside

faster

49. (2.00 pts) One difference between an alluvial fan and a delta is that an alluvial fan is____

- (●) A) Deposited on dry land
- ( ) B) Deposited in water
- ( ) C) Formed by stream deposition
- ( ) D) Relatively flat

50. (2.00 pts) A river can be rejuvenated by…

- (●) A) Increasing its slope
- ( ) B) Decreasing its speed
- ( ) C) Increasing the number of tributaries
- ( ) D) Decreasing its depth

You have reached the END of the Test. If time remains be sure you have no unanswered questions
